Business Thesis

A shoe rack with built-in mechanisms that removes and stores your shoes in one step, helping campus rental agencies earn more per student with a differentiated product.

Customer Segments

Start with campus rental agencies, then grow into shared housing and family homes

Beachhead: Student Rental and Campus Service Agencies

Organizations that already rent dorm essentials to college students and want new, differentiated products that can generate recurring rental revenue without adding significant operational complexity

- Target student rental and campus service agencies first because these organizations handle furnishing living spaces for college students
- Predict they will also be willing to add new products that can generate additional rental revenue without adding new operational complexity

Low-Effort Organization Seeking Young Adults

Young adults living in shared houses or apartments who want a fast, effortless way to keep crowded entryways organized without having to manually put their shoes away

Clutter-Conscious Families with Children

Families with multiple children and many pairs of shoes who want an easier way for everyone to consistently put shoes away and keep the entryway clean and organized

Value Proposition

Effortless shoe organization that creates new revenue for agencies and cleaner entryways for households

Student Rental and Campus Service Agencies

Increase revenue per student with a differentiated rental offering

Agencies can offer the shoe rack as an additional dorm-living product to students already using their rental services, creating an opportunity to increase order value without needing to acquire new customers or build a new distribution channel.

Low-Effort Organization-Seeking Young Adults

Stay organized without adding effort to your routine

Young adults can keep shoes from accumulating around their shared entryway without having to consciously organize them after coming home. Taking off and storing shoes becomes a single action, making a cleaner space easier to maintain.

Clutter-Conscious Families with Children

A cleaner entryway with less effort from parents

By making shoe removal and storage a single, easy action, children can put their own shoes away as they take them off, helping prevent clutter without parents constantly organizing shoes or reminding them.

Assessment of Scalability

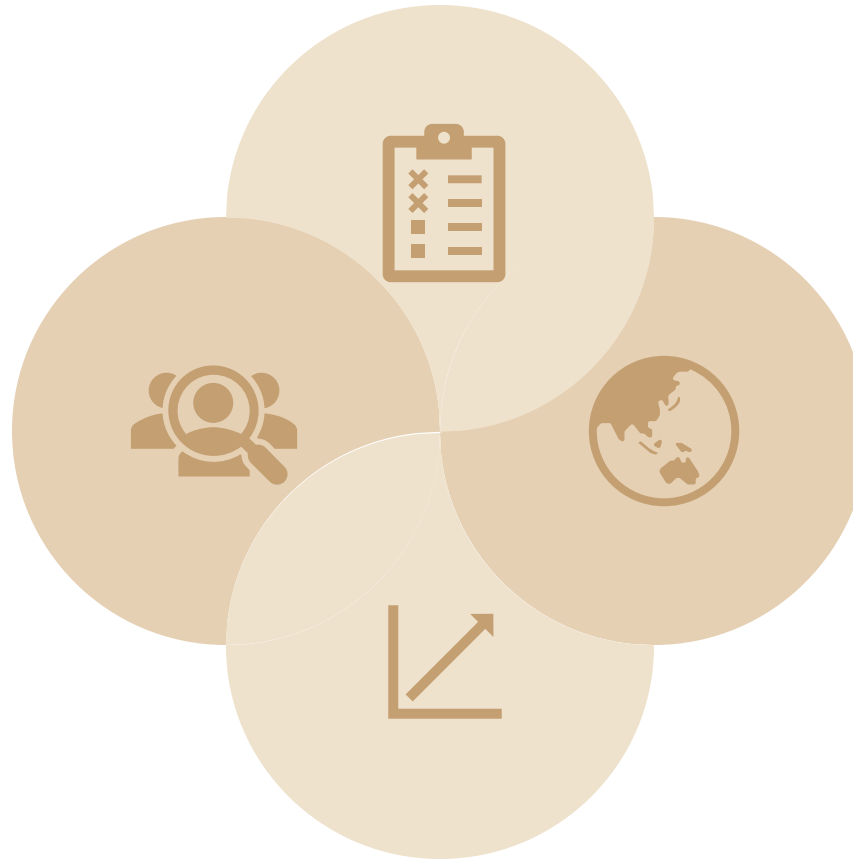

Replicable campus partnerships and a standardized design let us scale from dorms to households at a lower cost per unit

Assessment

Shoe clutter and the inconvenience of putting shoes away exist across markets, allowing the same product to serve students, young adults, and families nationwide

Repeatable go-to-market

Replicate the rental partnership model across campuses, then expand through DTC and retail channels to reach broader household markets

Foundation for expanding nationally

Campus rental agencies provide access to many students through a single partnership, creating a repeatable path for entering new markets

Manufacturing gets cheaper at scale

A standardized, passive design enables mass production and bulk purchasing, reducing per-unit costs as volume grows
